OMEGA Now Shipping “DIY” Tire Pressure Monitoring Systems

DOUGALSVILLE, GEORGIA – JULY 9, 2014 – Omega Research and Development Technologies, Inc. is now shipping the SM-TP-71P “DIY” Tire Pressure Monitoring System (TPMS). With this new tire pressure monitoring system you can add a wireless TPMS system to any car in less than 15 minutes. Simply replace all four valve stem caps with Omega’s tire pressure sensors and plug the Display into the cigarette lighter port of the vehicle. The display has a built in receiver that communicates with the 4 tire sensors, so there is absolutely nothing else to install.

As soon as the vehicle travels over 12.5 mph, the LCD display will show the real time tire pressure of all four tires, side by side. The system monitors for high & low tire pressure (High: 47psi / Low: 25 psi), fast or slow air leaks, and excessive temperature. If any individual tire sensor detects a problem condition, the display will alert the driver by beeping & flashing to identify which tire is having a problem, and what the problem is.

“This is a great addition to any vehicle pre-2008, where you have no idea what your tire pressure is unless you get your hands dirty, and manually measure the pressure of each tire, old school style,” says Shawn Cooper, Tech Support Manager for Omega. “And since SM-TP-71P gives you the actual pressure reading of each tire, it’s a great addition to any vehicle with an OEM TPMS system since the factory system only illuminates a light once you have a problem. In some cases it’s more affordable to add the SM-TP-71P to your vehicle than it is to replace a single OEM tire sensor” Cooper concluded.

The kit includes all necessary installation hardware and both Black & Silver sensor covers so that you can match the look of your rim.

About Omega:

Omega Research & Development Technologies has been an innovative leader in the vehicle security industry for over 40 years. Since its founding in 1971, Omega's product line has diversified to include remote start modules and other vehicle accessory products. Omega's most recent product offerings include the exciting new technologies of telematics, wireless and databus integration.

With the vision of the founder, Kenneth Flick, guiding the company, auto security systems remain the central focus of Omega Research & Development Technologies. In 1995, Omega became the only company in the keyless entry arena with a technology designed to prevent crime due to unauthorized transmitter access to vehicle systems. The patented technology, **Unauthorized Transmitter Alert**, promises to revolutionize the industry. Consumers can now have instant knowledge of any unauthorized access to their keyless entry systems. Most of the product lines manufactured by Omega are equipped with Unauthorized Transmitter Alert technology.

Omega's mission, as it was over four decades ago, is to provide reliable, leading-edge security and automotive accessory products at a competitive price.
