

808 EQ headphones have an in-line mic and click controller that lets you control music playback and answer/end calls easily. Here's how it works:

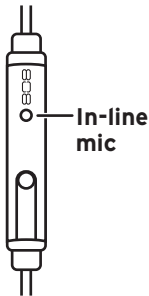

**To play/pause music:** Single click.

**To skip to the next song:** Quick double click.

**To go back to the previous song:** Quick triple click.

**To answer/end a call:** Single click.

Please note that not all functions work with all brands and models of phones. Each phone's user interface works differently—see the user manual that came with your phone for more information.

**Important:** *Make sure the in-line mic is facing outward while you're talking on the phone.*
