

Getting to know Bluetooth

Bluetooth wireless is a quick and easy way to connect a smartphone to a speaker or a headset. There are basically two steps to making Bluetooth work.

PAIRING: The two devices get to know each other.

CONNECTING: The two devices do something together (like play music).

This guide takes you through the steps to get started.

Step 1: Unpack

Make sure the following items came in this package.

- Your speaker
- USB charging cable

Step 2: Charge your speaker

Before you start using the Canz Plus speaker for the first time, it's a good idea to charge it completely.

To charge the speaker: Plug the included USB cable into the **DC IN** jack on the back of the speaker.

Plug the other end of the USB charging cable into a power source, like a computer or a USB charging adapter.

The **CHARGE** indicator on the back of the speaker is red while the speaker is charging. It turns off when the speaker is fully charged.

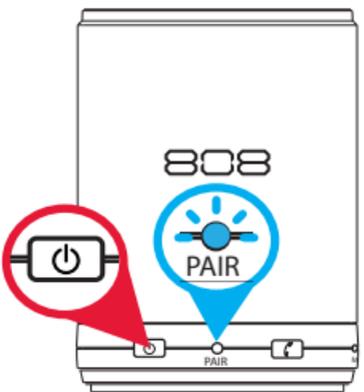

Note: You can use the speaker while it's charging.

Step 3: Turn on

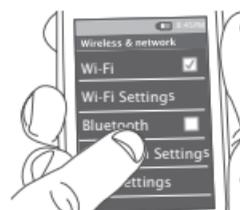

Press and hold the **⏻** button on the front of the speaker. The power up tone sounds and the **PAIR** indicator starts blinking.

After a few seconds, the speaker goes to Bluetooth pairing mode to set up with your smartphone.

Step 4: Pair + Connect

Enable Bluetooth on your smartphone or other device.

Make sure the **PAIR** indicator on the front of the speaker is blinking rapidly. (If it isn't, give a short double-press on the **⏻** button. The speaker gives an audio signal.)

If you've previously paired your phone or other Bluetooth device with this speaker, the speaker will automatically attempt to reconnect to that device when you switch the speaker on. If you want to pair to a new device, give a short double-press to the **⏻** button. The speaker gives a signal and the button starts blinking.

Choose **808 CANZ PLUS** from the pairing options on your smartphone. (If it's not in the list, choose "Scan" from your phone's Bluetooth menu.)

The speaker gives an audio signal when it's finished pairing and connecting to your smartphone. The **PAIR** button on the front of the speaker turns solid blue.

Note: The process of enabling Bluetooth and connecting varies from device to device. See your device's owners manual for more information and specific instructions.

Bluetooth Wireless Connection Tips

- Make sure the Bluetooth capability of your device is turned on.
- Make sure there's nothing plugged into the speaker's **LINE IN** jack when you're trying to use Bluetooth.
- The Bluetooth wireless connection works up to a range of roughly 33 feet (10 meters). This range may vary, however, based on other factors, such as room layout, wall material, obstacles, your device's Bluetooth performance, etc. If you're having problems connecting to this speaker, move closer to it.
- If your device asks you for a password to connect, use "0000".
- If you've paired your device with the speaker before but you're having trouble reconnecting when you turn the speaker back on, give a short press to the **⏻** button while the **PAIR** indicator is flashing. The speaker will attempt to connect to a previously paired device.

Step 5: Play music

Set your device's volume for music to 50%.

Note: This is to make sure the sound from the speaker isn't too loud when you start streaming.

Start playing music or other audio on your device. Within seconds, the speaker starts streaming the audio wirelessly via Bluetooth.

To adjust the volume of your audio: Use the volume controls on your phone.

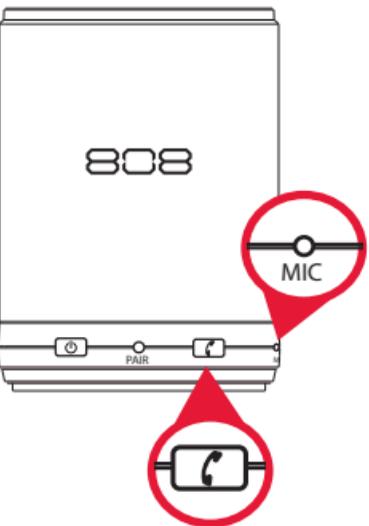

Using the speakerphone

This speaker has a built-in microphone, so you can use it for phone calls as well as music. Your phone will ring through the speaker when you're receiving a call.

To answer/end the call: Press the **CALL** button on front of the speaker.

Note: Make sure you're close enough to the speaker's built-in microphone so that the other person can hear you!

IMPORTANT: Not all phones support playback control and phone answer/end control. Check your phone's user manual for more information if you're having trouble with these functions.

Using the Aux In input

Use a 3.5mm audio cable (not included) to connect the audio output from your device to the **LINE IN** audio input on the speaker's back panel.

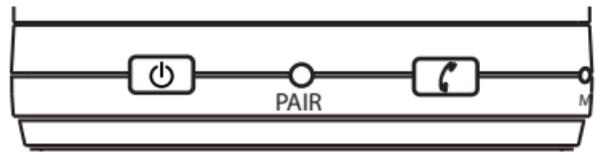

The speaker automatically switches to the **AUX IN** audio, and the **PAIR** indicator on the front of the speaker turns off.

To listen to Bluetooth audio again, unplug the cable from the speaker's **LINE IN** jack. The speaker will try to reconnect to the last Bluetooth device.

Tour of the speaker

Front

CALL button has two functions: (1) it turns the speaker on and off (press and hold) and (2) puts the speaker into pairing mode (short double-press) to connect to a new Bluetooth device.

PAIR indicator shows the speaker's pairing/connection status:

- fast blinking blue while pairing
- slow blinking blue while reconnecting
- solid blue when paired
- off when the LINE IN jack is in use or when the speaker's off.

CALL button answers or ends calls on a Bluetooth-connected phone.

MIC is the built-in microphone for using the speaker as a speakerphone.

Back

LINE IN jack lets you connect an audio device directly to the speaker using a 3.5mm audio cable.

DC IN jack connects to the provided USB charging cable to plug the speaker into a power source or adapter.

CHARGE indicator shows the charging status of the speaker:

- solid red while charging
- off when fully charged
